This front rack consists of two wheels and two arms, each with a cross bar that supports a two-sided frame. The frame has a reinforced front triangle, top tube, and seat stays, and an included recessed LED light. The rack holds up to 100 pounds (45 kg) in front of the front tire and 100 pounds (45 kg) in back of the rear tire. The frame is designed to fit one or two water bottles and two to four panniers. The bicycle also includes two rear-mounted additional crossbars for additional cargo. Thule charges \$40 for the rack and \$70 for the rack with lights. It is available in three sizes, 30" for road and mountain bikes, 33.5" for road and hybrid bikes, and 36.5" for mountain bikes and hybrids. Since 2013, Thule has used a model of the Thule Sideframe on all frames made in their factory outside of South Korea. Advantages Thule Rack is usually easier to install than traditional bicycle racks, and provides a more sturdy support for bicycles that are too big or small for common racks. Disadvantages Thule Rack is heavier than traditional bicycle racks, and is not compatible with all types of bicycles. History The first Thule rack was introduced in 2000 by the German bicycle manufacturer, Herse-Gardena. The rack has been installed on the front of bicycles since then. The Thule rack has become more popular among commuters as well as mountain bikers. With the popularization of the Thule rack, other manufacturers such as Schwinn and Dahon have followed the design. The first Thule rack with lights was released in 2003 by Thule. The Thule lighted rack was later updated and released with a recessed LED light instead of the four typical reflectors mounted in front of the Thule rack. The rack with lights was named Thule Caddy. Thule Caddy is a bicycle trailer that attaches to Thule Lighted Front Rack. In 2010, the Thule Rack was brought back to the marketplace. The new Thule Rack was designed to be compatible with more types of bicycles. In order to fit more types of bicycles, the new Thule Rack includes a patented side frame that can attach to most bicycles with only a few parts. The new Thule Rack also includes a new lock that can be used to secure the bike to the rack. The traditional Thule rack 82157476af
